

Meridian

Network PDF Printer

Meridian is a networked PDF printer engineered for server-side rendering that lets you leverage your enterprise computing power with no per-user, or per-document fees. Fully "Point and Print" enabled, Meridian means zero client side installation and administration for your IT staff. With its unique "round trip" technology (optional), the hassles of managing individual PDFs are eliminated—everything appears local to the end user. Digitally signed for Microsoft Windows® compatibility, you can rest assured the drivers have been rigorously tested for every possible scenario.

ActivePDF Meridian Features:

• .NET and COM APIs

Add affordable file conversion functionality to all applications. Convert commonly used file formats To/From PDF with a single method call.

• PDF Security

Apply 40-bit and 128-bit security to PDF output. Password-protect security options allow you to disable printing functions to prevent copying text and graphics. Set document metadata including title and author.

• Print to PDF

Any application that can be printed to a printer can be converted and printed to PDF. Optimize performance and scalability for developers and enterprise users when integrating PDF generation functionality.

• Centralized PDF Settings

Centralized PDF generation and conversion functionalities reduces software and support costs.

Requirements:

Operating System

- Windows Server® 2012
- Windows Server® 2008

Additional Software Requirements

- Microsoft® .NET Framework

• *ActivePDF Meridian installs on one server and pushes out a print driver to clients through Group Policy.*

• *This is a server-based license with no per-user count.*

• *Meridian appears to users as just another printer option - simply choose File>Print>Meridian and print to PDF instead of to paper.*
